

Seeds large, seldom more than one in each Grape. The filaments and anthers frequently remaining when the fruit is quite ripe.

The vine grows freely, and bears well; but we learn from Mr. WHEELER's gardener, Mr. THOMAS CAREL, that it requires a good heat, and great attention must be paid to it at the time of flowering. It is recommended to those cultivators who can give it a place in the stove\*.

\* Since the above was written, this Grape has appeared under the name of *Raisin de Cabo*. With what propriety this name is given, cannot at present be ascertained.
